IT1100–Internet and Web Technologies   2024

1. Write advantages of using PHP in web applications.

2. Write the output from the following.

   ```php
   <?php define("GREETING", "Welcome to IWT Module!", true);
       echo greeting;
   ?>
   ```

3. Explain the difference between == and === using a suitable example.

4. Define an array with 5 animals, "Lion","Wolf","Dog","Leopard" and "Tiger".

   a) Print the array using a foreach loop to get the following output.
   ```
   Lion
   Wolf
   Dog
   Leopard
   Tiger
   ```

   b). If the length of the animal is greater than 4, replace it with "Pass" and print the elements again.
